

Informed consent for Metavital scanner

The **METAVITAL HUMAN**^{TS} (Transmitter System)

MNLS biophoton technology developed in Europe This technology is based on the original NLS method, known from established systems such as OBERON. It has embedded some of Rife frequency but updated and upgraded with further development of the software and hardware in digital form to produce visual measurable assessments with graphics, percentage, location, description that help to guide in choosing further tests and treatments.

This scanner can be done in office and results obtained on the spot to determine disease tendencies. It is fast in producing test results and allows to be completed all in one visit. This scanner technology testing is not insurance reimbursable.

Metavital scanner uses **NON invasive biophotons** to trace bioenergetic changes in the body and it is registered in Europe as medical device. It can detect early energetic imbalances in bones, tissues, mitochondria, organs, nerves, lymphs and microorganisms (parasites, viruses, bacteria). This technology is able to provide treatment through biofeedback frequency to support and rebalance the bioenergetic changes.

For more information please visit this website:<https://www.metavital.eu/human-ts/?lang=en>

*To confirm the full diagnostic it should be follow by a blood lab work and any additional images needed

Here I confirm to agree on testing with Metavital scanner here in office with Dr Wright to assess my biofrequency resonace. I release Dr Wright of any responsibility for any technical or mechanical errors or miss interpretations.
